

# Sanjeevani Hospital & Research Center

CENTRAL LABORATORY & ICU VITALS FLOWSHEET *Authorized Signatory: Dr. Rajesh Mehta, MD Pathology*

## 1. Patient Demographics

Patient Name: Sam  
Patient ID (MRN): sam-987654321  
Location: ICU-S1  
Date & Time: May 05, 2026  
Attending Nurse: Nurse Anita (nurse001)

## 2. Bedside Vitals (Recorded at 08:00)

| Parameter        | Recorded Value         | Unit        |
|------------------|------------------------|-------------|
| Heart Rate       | 115                    | bpm         |
| Blood Pressure   | 85 / 50                | mmHg        |
| Respiratory Rate | 28                     | breaths/min |
| SpO2             | 88                     | %           |
| FiO2             | 0.6                    |             |
| Temperature      | 39.1                   | °C          |
| GCS Score        | 13                     |             |
| Current Drips    | High-dose Vasopressors |             |

## 3. Laboratory Findings (STAT Panel)

### Complete Blood Count (CBC)

| Test      | Result   | Unit                      | Reference Range |
|-----------|----------|---------------------------|-----------------|
| WBC Count | 18.2 (H) | $\times 10^3/\mu\text{L}$ | 4.0 - 11.0      |
| Platelets | 85 (L)   | $\times 10^3/\mu\text{L}$ | 150 - 450       |

### Comprehensive Metabolic Panel (CMP)

| Test              | Result  | Unit   | Reference Range |
|-------------------|---------|--------|-----------------|
| Sodium            | 135     | mmol/L | 135 - 145       |
| Potassium         | 5.8 (H) | mmol/L | 3.5 - 5.1       |
| Creatinine        | 2.1 (H) | mg/dL  | 0.6 - 1.2       |
| Bilirubin (Total) | 3.5 (H) | mg/dL  | 0.1 - 1.2       |

## Arterial Blood Gas & Others

| Test               | Result  | Unit   | Reference Range |
|--------------------|---------|--------|-----------------|
| Lactate (Arterial) | 4.5 (H) | mmol/L | 0.5 - 1.0       |

---

## 4. Attending Staff Notes

*Patient presents with acute distress. Blood culture drawn and sent to microbiology, pending results but suspect MRSA. Patient remains on high vasopressor support. High risk of sepsis.*

--- END OF REPORT ---
